The Netherlands

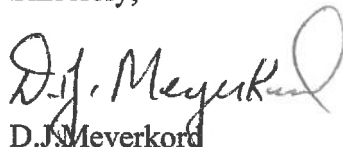

Dear Mr. Determan:

We have completed our review of the EMD laboratory inspections of your candidate SAE 40, HVI, 13 TBN (ASTM D-2896) diesel engine lubricant identified as **Railroad Power 413** (Oil Code IM12824A). This formulation is compounded with Infineum M7233 additive concentrate at 12.2% wt. in ExxonMobil APE 600 and ExxonMobil APE 2500 base stocks.

The results indicate that the physical properties are within acceptable limits, non-corrosive to silver metals and exhibited excellent oxidation stability attributes.

As a result, **Railroad Power 413** qualifies for EMD's internal listing, as worthy of full-scale field test in EMD engines and this letter will serve as recognition of such status.

Sincerely,

D.J. Meyerkord
